AMPESS

for the culture of the psychology and sanitary ethics associate ...

AMPESS it's an association been born from a group of professionals (nurses,doctors,psychologists) that they operate in sanitary field....

The peculiar characteristics of the founder of AMPESS are those of professionals (daily engage "in front line") that they try to face problematic the charitable ones, not only from the technical point of view daily, but also ethical and psychological for having one alternative vision of the individual....

What we resolve to do is to ahead carry plans hat can offer one psychological attendance not only turned the patients, but also to the relative and the rescuers...but in order to make this it's necessary to above all carry to acquaintance the plan to we professionals,therefore to diffuse a culture is of psychological dynamics (whose acquaintance is becaming indispensable) is of ethics, than vision of the man allows us to face thematic the associate sanitary in one "object to cure", but like individual with one mind bearer of feelings...emotions...values...

We become accaunt that we have "road to make"...,but we do not lose heart ourselves and we head at the passion and the optimism in order to make to grow AMPESS hoping to succeed in naturally giving to a small cultural contribution to the system sanitary associate, with the indispensable aid and the experience of who will want to collaborate with we as associate... the association is opened to al the figures that operate in field sanitary associate just in order to offer a precious enrichment from "more directions"...

This therefore is the beginning of the way...that we hope can be developed in future in a rich travel of emotions and interesting encounter...
